

FAASTeam presents:

Corrosion: What to Look for and What to do; A part of the WINGS Proficiency Day

Scott Hodgen will discuss corrosion and airframe deterioration. All aircraft are subject to some type of deterioration. Wood, dope and fabric aircraft have mold, rot, and UV. Metal aircraft have corrosion. Aluminum will have surface deterioration (that white powder that shows up on the bare aluminum, blisters showing up under the paint. Steels have rust. Yes even composites will degrade. What do you look for and what needs to be done about it? As aircraft owners and operators, we have invested a lot of money in our flying and our beloved flying machines, and we want to take care of them when problems start showing up.

Come early to enjoy other events in our Wings Proficiency Day program. Gates open at 7am with this seminar beginning at 3pm. Food and drink, to include early breakfast, will be available via catering by Granville's Gourmet Ribs and Barbecue throughout the day.

Directions: Seminars and vendors will be in Signature's large hangar, north end of ramp. Driving to HSV airport, follow signs to General Aviation. Other signs/personnel will direct you to parking on the ramp adjacent to the large hangar.
